
VUL

Posted by bukojoe - 2007/01/11 09:35

Subok lang mga bossing... :lol: :lol:

Descending triangle for VUL nga ba?, bearish na si VUL, wawa naman...if this breaks the support then baka sa .9 to 1 pulutin ito, if the triangle breaks to the upside, then should be the continuation of the uptrend...1.8-1.9 target ..depends on break out.

DISC: ala akong VUL, ala din akong PERA :lol:

Re: VUL

Posted by Yamada Jiro - 2007/01/11 21:56

Di na ba BSE index issue ito? :lol:

Re: VUL

Posted by yeahbah - 2007/01/12 23:53

ano yang force index? sapilitang trading ba yan? :lol:

meron din palang sungay pattern hehe

Re: VUL

Posted by ceteris_paribus - 2007/01/13 05:44

:lol: Sungay :lol:

Re: VUL

Posted by bukojoe - 2007/01/13 07:03

hahaha! force index eh indicator of the strength ng bulls at bears...pag negative, its bearish, positive, bullish...pag asa gitna lang alang trend hehe....

pag nag peak ng mataas ang FI, sign to sell...

ano yang force index? sapilitang trading ba yan? :lol:

meron din palang sungay pattern hehe

Re: VUL

Posted by yeahbah - 2007/01/13 10:36

ang cute naman. kita na rin sa sungay formation yung selling signal, bearish divergence eh.

:)

Re: VUL

Posted by tina.posadas - 2007/01/31 22:13

Mukhang nag rounding bottom pala ang VUL from 2000 - 2006. Sayang hindi ko nasakyan when it broke out last December.

Bonner also pointed out its forming a symmetrical tri. See thread on Ask Bonner.

Master Bonner - you think puwede pa sakyan ito since hindi pa nahihit yong rounding bottom TP of 1.88 and its now only at P1.54? Or is it better to wait if it breaks out of the sym triangle na lang?

Hmmm... here I go again, getting tempted on trading 3rd liners. Basura stock ba to??? :roll:

=====

Re: VUL

Posted by Yamada Jiro - 2007/01/31 22:30

I would trade the triangle. Huli na ako for the rounding bottom. Besides it may take VUL to reach that target of the bottom within 3 yrs pa kung 6 yrs ang formation.

I'm not that patient.

=====

Re: VUL

Posted by tina.posadas - 2007/02/06 22:53

Bonner, may gusto lang ako i-clarify. In the attached VUL chart, there is a symmetrical triangle. I've noticed that the MACD is pointing down, while the price action is trending up. My question is:

1. Does this confirm a bearish divergence and that the symmetrical triangle is likely to breakdown? or
2. Is it too early to say that there is a bearish divergence because the 2nd peak of the MACD line has not been formed yet (kahit pa MACD is definitely pointing down already)??

May I also ask - can the RSI be used to catch divergences too, ala MACD? i.e. RSI going down and prices going up, will indicate bearish divergence?

Thanks a lot.

=====

Re: VUL

Posted by Yamada Jiro - 2007/02/06 23:23

Let's have a refresher on divergences.

Prices and the oscillators move away from each other. You get a bullish divergence when prices make lower lows and the oscillator (either MACD or RSI or both) make higher lows. You get a bearish divergence when prices make higher highs but oscillator makes lower highs.

We know what's coming, we just have to prepare for it. As like patterns, I consider the divergence to be confirmed only when prices start going in the direction of the oscillator. By such time, a trendline would've been reversed.

=====

Re: VUL

Posted by tina.posadas - 2007/02/07 00:49

Oh, now I get it. :idea:

So hindi pala ito bearish divergence bec. the prices are not making higher highs. Dun ko kasi tiningnan sa support line to determine the trendline of the prices, dapat pala sa resistance line ako titingin if I'm checking for a bearish divergence.

Thanks for the clarification.

Re: VUL

Posted by - 2007/02/23 04:30

VUL had its second largest volume of trade today. it's average price at 1.21. a clear reversal of a down trend.

PD: i bought a lot today.

Re: VUL

Posted by parabolic888 - 2007/02/23 09:04

Pwede to.. sa breakout for me.. I'm chicken!

Re: VUL

Posted by mhanz794 - 2007/02/23 22:05

master danny, would it be safer to wait MACD to cross-over the zero line, though RSI is pointing upward na. or mas safer to wait for the break-out na lang at 1.60 level before making any position..tnx

Re: VUL

Posted by parabolic888 - 2007/02/25 12:38

master danny, would it be safer to wait MACD to cross-over the zero line, though RSI is pointing upward na. or mas safer to wait for the break-out na lang at 1.60 level before making any position..tnx

I'd wait for the trend to take effect. Yes .. breakout muna... :-)

PD: YEAH!!! I HAVE THIS ONE!!!

Re: VUL

Posted by - 2007/04/08 23:07

sa akin naman inverse H&S nakikita ko. yung ascending triangle mo is my inverse H&S. the right shoulder has formed. the volume almost look like an invers H&S too... kulang nalang strong volume at the right shoulder..

good luck sa me hawak nito. this week might be it...

Re: VUL

Posted by - 2007/04/09 21:05

closes 1.38 with a high of 1.42, BREAKOUT with volume of 24.5M shares - 5th largest volume so far since it's december breakout.

goodluck to us all! 2.00 here we come!

Re: VUL

Posted by yeahbah - 2007/05/24 06:46

sweet! will buy more :D

Re: VUL

Posted by jeff - 2007/06/11 07:30

Another disclosure will probably come out within the week. ;-)

Re: VUL

Posted by - 2007/07/14 10:03

Firstly, I'm disappointed with the Phisix performance last Friday. Hopefully come Monday, we'll have a more exciting week.

Did you guys notice the sudden sell off in PA, IS, AJO, SUN almost simultaneously past 11AM? Nagpanic selling yata mga tao, could it be PSE sniffing their noses again on the speculatives... :?

Anyway, just want to share this VUL chart. VUL has been one of the more boring mining stocks. I'd like to share this chart with the group. Is this a valid cup and handle?

If yes, then maybe a buy and hold strategy for VUL would work, and we'll see a price appreciation to somewhere near Php 2.00?

There's no rush to buy VUL, but just keep this on your radar screen. If you zoom in to the last 2 trading days, it's been trying to go past the 30 and 65day moving SMA, a resistance level for VUL for quite some time. Imminent breakout?

:)

Re: VUL

Posted by - 2007/11/25 07:13

bandwagon, where did you get your data from year 2000 and below?
my data is only from yr.2000.

so this is a cup and handle with the handle presently consolidating inside a possible descending triangle. :o

here's the handle im posting. its for the bottom pickers and as boss danny would call the "cheapskates" :) but if you are neither one, this is something to watch out for.
