
AAPL - Apple Computers

Posted by Yamada Jiro - 2007/01/09 17:52

<http://www.marketwatch.com/news/story/apple-unwraps-iphone-macworld/story.aspx?guid=%7BE5F71BEE%2D9873%2D4F52%2DA4D9%2DA6EAE4942D07%7D&tool=1&dist=bigcharts&>

This is a news story of Apple unveiling the iPhone. Yari si Nokia, SonyEricsson, Motorola, etc. unless they can immediately come up with their own version of this.

This link contains the video of Steve Jobs presenting and explaining the iPhone to the audience.

"Hello Starbucks? 4000 lattes to go"

Steve you are the best! The difference between the others and this iPhone is definitely going to be the software and ease of use. Price point is kinda high pero its a high end phone so it will compete with the likes of Nokia's communicator line, Blackberry, O2 etc...

OSX pa yung software so siguradong pleasant, easy to use, and problem free (99% of the time)

forming a flag pole.... 2 poles worth above 100 million shares each... I am hoping for a week or 2 of consolidation. Finally I think I have an excuse to own the stock of my favorite company.

And yes our favorite innovative company has their stock now for the 1st time trade above \$100. I remember AAPL's humble beginnings when I was just about to start trading the US markets nasa \$40++ pa lang ito. Congratulations to Steve and AAPL.

New iPod's were introduced and the iPhone has been cut to \$399 thats around P16000 na lang which is quite cheap for the phone of this caliber. Stock fell though kasi isip nila it will affect earnings, me thinks it will boost sales and bawi sila sa volume and the earnings will not be affected.

Double Top!? SHORT! MACD pointing downwards....

Is this the end of Apple stock?

Teka, wag mo unahan. Di mo masabi at baka biglang mag symmetrical triangle yan.

=====

Re: AAPL - Apple Computers

Posted by Sherwin Go - 2007/09/25 15:04

Tama si Bonner wag mo unahan dahil now AAPL just broke its symmetrical triangle and if you shorted this with the assumption of a double top masakit yan.... Here is the chart target is \$176 flat. Wala lang volume pero personally sakin if maganda talaga di ko na npanansin volume and it still works.

DISCLOSURE: I do have AAPL but not because of this pattern binili ko yung akin during the time na-introduce yung iPhone matagal na yun since long term na ako mag trade sa US para maximum profit minimum commission.

And earnings were 66% above last years and tops forecasts. Stock rocketed after hours and with that I end my successful relationship with AAPL. For the past 8 months you have given me joy and pride (to hold on to you) but now I must let you go since the news already out :lol: (sell on news). Sold it at \$186.49 at the after hours this is already way above my target. Sa uulitin AAPL basta pullback naman dyan (medyo malaki laki ah) :lol:

Ako nga hangang ngayon natutukso bumili ng iPhone even at one point I was thinking of importing one from the US and hack it para gumana sa Globe. I guess the better part of my judgement took over and said NO. Hintay na lang dumating dito yun who knows an iPhone mini is being rumored about
